

# CLOUD ASSESSMENT

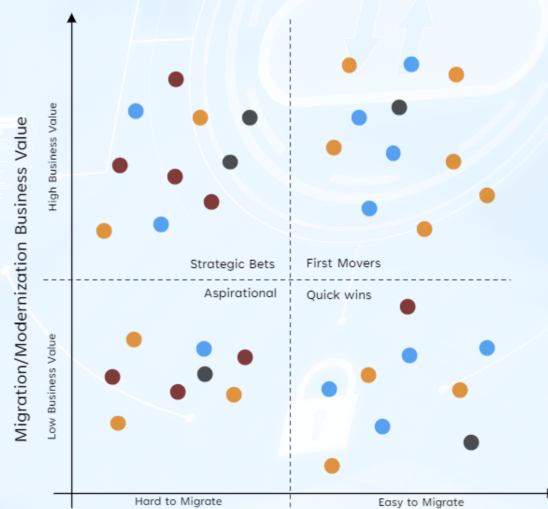

## Cloud Assessment Overview

### OBJETIVE

To evaluate a company's current infrastructure, applications, and data to identify optimization opportunities for cloud migration. It includes developing a personalized strategy for cloud adoption, data management, and cybersecurity, providing a detailed roadmap for a smooth transition.

This process establishes a robust governance model to ensure security and compliance, focusing on managing cybersecurity risks with advanced protection technologies. Overall, it facilitates cloud migration, optimizes business operations, enhances security, and prepares the company for future technological challenges.

myCD evaluates customer's application landscape in a clear and strategic way to build a roadmap that maximizes Business Value and Outcome first by addressing business needs that the migration process can target and solve

## BENEFITS

### 01 ACCELERATED CLOUD ADOPTION

Shorten migration cycles, improve efficiencies fast.

### 02 OPTIMIZED TOTAL COST OF OWNERSHIP (TCO)

Optimize spending with detailed cost forecasting.

### 03 INCREASED PROFITABILITY

Automate migration, reduce time significantly.

### 04 STANDARDIZED CLOUD PRACTICES

Implement consistent processes across locations.

### 05 Enhanced end-user satisfaction

Create optimal environment, improve user experience.

- Rearchitected

### 1 Preparation Planning

- Stakeholder identification and approach plan
- Interview scheduled and management
- Evaluation criteria definition and agreement

### 2 Information Gathering

- Interview execution
- Toolkit data load
- Migration Feasibility analysis

### 3 Analysis & Recommendations

- Results analysis
- Recommendation generation
- Presentation
- TCO & Migration Analysis
